PROFILE

Software engineer with 9+ years of experience designing and evolving software that has to keep working: distributed services, legacy platforms, and systems connected to physical machinery. Strongest in C#/.NET, backend architecture, real-time and industrial integrations, and careful modernization under operational constraints. AI-assisted development extends my delivery into interfaces and product prototyping while I retain ownership of architecture, verification, security, and maintainability.

PROFESSIONAL EXPERIENCE

- GIAMMAR · System Ceramics** / *Software Engineering Consultant* 2024 - Present
 - Build distributed .NET services for industrial manufacturing R&D, integrating PLCs, OPC UA, proprietary binary protocols, RabbitMQ, Redis, and real-time machine data.
 - Implement custom connectors that translate byte streams and PLC memory areas into typed, maintainable domain interfaces.
 - Develop a quality pipeline for tile imagery and defect data, supporting real-time usable-area decisions, reprocessing, long-term traceability, and production analysis.
- MSC Mediterranean Shipping Company** / *Senior .NET Developer* 2021 - 2023
 - Evolved globally deployed shipping and document systems across C#, C++, SQL, stored procedures, and codebases developed over decades; collaborated with US teams, including six weeks onsite for knowledge sharing.
 - Helped redesign a manager-agent platform for remotely distributed DLL capabilities, Quartz scheduling, health reporting, dependency loading, and long-lived backward compatibility.
 - Coordinated implementation across a four-person group for a document flow spanning a third-party service, the central platform, and SAP, adding observability to shared-folder integration.
- Amaris · Credemtel** / *.NET Backend Developer / IT Consultant* 2019 - 2021
 - Built backend services for a banking document-management R&D platform using .NET, REST APIs, microservices, RabbitMQ, Elasticsearch, ETL pipelines, and structured logging.
 - Redesigned a reusable read/write/transform package for arbitrarily nested JSON documents whose schemas were externally configured, keeping behavior consistent across APIs and services.
- iSolutions Software Engineering** / *Full-stack Developer* 2021
 - Maintained and evolved established applications, mapping hidden dependencies and delivering conservative changes without regressing existing behavior.

EARLY CAREER & INDEPENDENT WORK

- 2016 - 2017**

STARWORKGC Junior Programmer & Particle Effect Artist
Joined during the fourth year of high school and rewrote a real-time collision predictor for Galactic Fighters, a 3D Unity space shooter, using projected movement and ray-based checks to preserve performance on lower-powered hardware.
[Galactic Fighters on Steam ↗](#)
- 2017 - 2018**

MELAZETA Unity Developer Intern
Built mobile and AR experiences, including a Winx dress-up application released on Google Play, while collaborating with artists and delivering against production deadlines.

SELECTED ENGINEERING DECISIONS

01 · REAL-TIME Predictive collision warnings without expensive future-state simulation.	02 · CONFIGURATION One reusable document package for runtime-defined schemas and arbitrary JSON nesting.
03 · COMPATIBILITY Remote DLL capability distribution with Quartz scheduling, health reporting, and long-lived contracts.	04 · INDUSTRIAL DATA Durable defect data serving both real-time decisions and long-term production analysis.

CAPABILITIES, SELECTED WORK & CREDENTIALS

CORE C# / .NET · distributed systems · software architecture · real-time and industrial integration · legacy modernization TOOLING RabbitMQ · Redis · Elasticsearch · SQL · REST · OPC UA · PLC · Quartz · C++ · Unity	OSUS · INDEPENDENT LAB RosettAI · FCHForge · OSUS Ecosystem · Sounds End-to-end experiments across AI document processing, industrial tooling, shared product infrastructure, and consumer concepts. AI-ASSISTED DELIVERY Extends interface implementation and rapid product prototyping; architecture, validation, testing, security, and trade-offs remain my responsibility.	ENGLISH C2 comprehension · EF SET 84/100 Reading 78 · Listening 90 Verified certificate ↗ EDUCATION IIS F. Corni, Modena Diploma in Computer Science · 2018
