PROFILE

Senior software engineer with seven years of professional experience, writing and shipping production code since 2016. I work on distributed systems, legacy platforms, and industrial software, with C#/.NET, real-time integration, and safe changes to operational software at the core. Two years working daily with US-based teams, and two products of my own running live in production. I now ship with AI agents doing most of the typing; architecture, verification and trade-offs stay mine.

EXPERIENCE

Giammar — Jan 2024 – Present
Software Engineering Consultant · client: System Ceramics

- Build distributed .NET services for industrial manufacturing R&D — PLC integration, OPC UA, RabbitMQ, Redis and real-time machine data. Deployed across dozens of manufacturing customers, from single-line plants to sites running 20+ production lines.
- Design binary-protocol connectors and the quality-data pipeline behind real-time decisions, defect reprocessing and long-term traceability.

MSC Mediterranean Shipping Company — Nov 2021 – Dec 2023
Senior .NET Developer

- Helped redesign a manager-agent platform distributing DLL capabilities across several hundred installations in ports worldwide, preserving backward compatibility with older deployments.
- Improved global shipping systems built on C#, C++, SQL and stored procedures, working extensively with legacy code.
- Coordinated a four-person team building a document flow between third-party services, the central platform and SAP.
- Worked daily with teams in the United States across a 6–9 hour time difference, including a six-week onsite assignment.

iSolutions Software Engineering — Mar 2021 – Nov 2021
Full-stack Developer

- Worked on a platform powering online betting sites for multiple operators — customer-specific features such as custom reward systems, plus slot-game integrations with third-party providers.
- Identified hidden dependencies in existing code and delivered changes without regressions in a live-money environment.

Amaris — Sep 2019 – Mar 2021
.NET Backend Developer / IT Consultant · client: Credemtel

- Developed document-management services with .NET, REST APIs, RabbitMQ, Elasticsearch, ETL pipelines and structured logging.
- Designed a package for nested JSON documents, with each structure defined entirely by external configuration and shared across ~20 APIs, microservices and frontends.

Melazeta — 2017 – 2018
Unity Developer Intern

- Built Unity mobile and augmented-reality applications, including a Winx dress-up app released on Google Play.

STARWORKGC — 2016 – 2017
Junior Programmer & Particle Effect Artist

- Joined the startup during high school. Rewrote the Unity/C# collision predictor for *Galactic Fighters* (released on Steam), using projected movement and ray checks to produce configurable warnings that also ran on lower-power hardware.

OSUS · INDEPENDENT LAB

RosettAI LIVE
rosettai.osus.it — no sign-up needed

AI subtitle & document translation. ASP.NET Core 10 + Python workers over RabbitMQ, PostgreSQL, OpenTelemetry tracing and Grafana dashboards.

Bubbles LIVE
bubbles.osus.it

Daily social music app — one prompt, one song, group reveals. Next.js, Prisma, Clerk, Expo native client.

OSUS Ecosystem
identity · billing · wallet gateway

Shared services for the OSUS apps. Clean Architecture .NET 10 with a published SDK; 299 tests green across unit, integration and architecture suites.

AI-ASSISTED DEVELOPMENT

AI agents do most of the typing across the OSUS line and my personal tools. I own the spec, the glossary, the architecture, the coding standards, the review and the CI that enforces whatever a script can check. Latest: CollectionVault, a personal catalog, from spec to daily use in two weeks — 357 commits and 77 pull requests in 19 days, with its core rules enforced in CI.

SKILLS

CORE
C# / .NET · distributed systems · software architecture · industrial integration · legacy systems

TECHNOLOGIES
RabbitMQ · Redis · Elasticsearch · PostgreSQL · SQL · REST · OPC UA · PLCs · EF Core · Next.js

PLATFORM & DELIVERY
Docker · Docker Compose · GitHub Actions · CI/CD · OpenTelemetry · Grafana · Prometheus · Claude Code

TESTING
Unit / integration / architecture testing · Testcontainers · xUnit

LANGUAGES

Italian — native
English — C2 comprehension · EF SET 84/100 (Reading 78 · Listening 90) · verified certificate

EDUCATION

IIS F. Corni, Modena
Diploma in Computer Science · 2018
