# Davide Gozzi

## Senior Software Engineer — C#/.NET, backend and distributed systems

Modena, Italy (remote, CET) · +39 389 126 0948 · david3gozz1@gmail.com · linkedin.com/in/davide-gozzi5 · github.com/g4solio · g4solio.github.io/portfolio

### SUMMARY

Senior software engineer with 7 years of professional experience, writing and shipping production code since 2016. I build backend and distributed systems in C#/.NET for banking, global shipping and industrial manufacturing: REST APIs, microservices, messaging with RabbitMQ, Redis, SQL and PostgreSQL, real-time integration with machines (OPC UA, PLCs, binary protocols), and safe change in large legacy codebases. Two years working daily with US-based teams across a 6–9 hour time difference. Two products of my own running in production. I use AI coding agents in daily work under written specifications, coding standards and CI checks, and keep architecture, review and verification my own responsibility.

### EXPERIENCE

**Software Engineering Consultant — GIAMMAR Next Srl, for client System Ceramics**
January 2024 – Present · Modena, Italy

- Build distributed .NET services for industrial manufacturing R&D: PLC integration, OPC UA, RabbitMQ, Redis and real-time machine data, deployed across dozens of manufacturing customers, from single-line plants to sites running 20+ production lines.
- Design binary-protocol connectors and the quality-data pipeline that turns tile-defect detections into real-time production decisions, with defect reprocessing and long-term traceability.

Technologies: C#, .NET, RabbitMQ, Redis, OPC UA, PLC and binary protocols, real-time data pipelines.

**Senior .NET Developer — MSC Mediterranean Shipping Company**
November 2021 – December 2023 · Turin, Italy, with US-based teams

- Helped redesign a manager-agent platform that distributes DLL-based capabilities to several hundred installations in ports worldwide, scheduled with Quartz, preserving backward compatibility with older deployments.
- Improved global shipping systems built on C#, C++, SQL and stored procedures, working extensively within legacy code while keeping production running.
- Coordinated a four-person team building a document flow between third-party services, the central platform and SAP.
- Worked daily with teams in the United States across a 6–9 hour time difference, including a six-week onsite assignment.

Technologies: C#, C++, SQL, stored procedures, Quartz, SAP integration.

**Full-stack Developer — iSolutions Software Engineering**
March 2021 – November 2021 · Modena, Italy

- Developed customer-specific features such as custom reward systems and integrated third-party slot games into a platform serving multiple online betting operators.
- Traced hidden dependencies in an established codebase to deliver changes without regressions in a live-money environment.

Technologies: C#, .NET, SQL, third-party game provider integrations.

**.NET Backend Developer / IT Consultant — Amaris, for client Credemtel**
September 2019 – March 2021 · Reggio Emilia, Italy

- Developed document-management services for a banking environment with .NET, REST APIs, RabbitMQ, Elasticsearch, ETL pipelines and structured logging.

- Designed a reusable package for reading, writing and transforming nested JSON documents whose structures were defined by external configuration, shared across about 20 APIs, microservices and frontends.

Technologies: C#, .NET, REST APIs, microservices, RabbitMQ, Elasticsearch, ETL.

**Unity Developer Intern — Melazeta**
2017 – 2018 (two school-work placements) · Bagnolo in Piano, Italy

- Built Unity mobile and augmented-reality applications, including a Winx dress-up app released on Google Play; worked on UI and in-app purchases with artists and release deadlines.

**Junior Programmer and Particle Effect Artist — StarworkGC**
2016 – 2017 · Bagnolo in Piano, Italy

- Joined an independent game startup during high school; rewrote the Unity/C# collision predictor for Galactic Fighters (released on Steam) using projected movement and ray checks, producing configurable warnings that also ran on lower-power hardware.

## INDEPENDENT PROJECTS (OSUS)

- **RosettAI** (rosettai.osus.it, live): AI subtitle and document translation. ASP.NET Core 10, Python workers over RabbitMQ, PostgreSQL, OpenTelemetry tracing, Grafana dashboards. Timestamps and sequence numbers are stripped before the model and restored deterministically after.
- **Bubbles** (bubbles.osus.it, live): daily social music app. Next.js, Prisma, Clerk, Expo native client.
- **OSUS Ecosystem** (backend MVP): identity, billing and wallet services shared by the products. Clean Architecture on .NET 10 with a published SDK; 299 tests across unit, integration and architecture suites; reservation-based spending; idempotent Stripe webhooks.
- **CollectionVault** (private, in daily use): personal catalog application taken from specification to production in two weeks with AI coding agents under written standards and CI checks: 357 commits and 77 pull requests in 19 days.

## SKILLS

- **Languages:** C#, SQL, C++, TypeScript/JavaScript, Python
- **Frameworks and platforms:** .NET, ASP.NET Core, Entity Framework Core, Next.js, Unity
- **Data and messaging:** PostgreSQL, SQL, Redis, RabbitMQ, Elasticsearch
- **Industrial integration:** OPC UA, PLC integration, binary protocols, real-time machine data
- **Delivery and operations:** Docker, Docker Compose, GitHub Actions, CI/CD, OpenTelemetry, Grafana, Prometheus
- **Testing:** xUnit, Testcontainers, unit, integration and architecture testing
- **Practices:** REST API design, microservices, Clean Architecture, backward compatibility, legacy modernization, AI-assisted development with specifications, coding standards and CI guards (Claude Code)

## EDUCATION

**IIS F. Corni, Modena** — Technical high-school diploma in Computer Science (Perito Informatico), 2018

## LANGUAGES

Italian (native) · English (C2 comprehension, EF SET 84/100, verified certificate; daily working language with US teams)
